

PhishGuru Assessment and Training Service

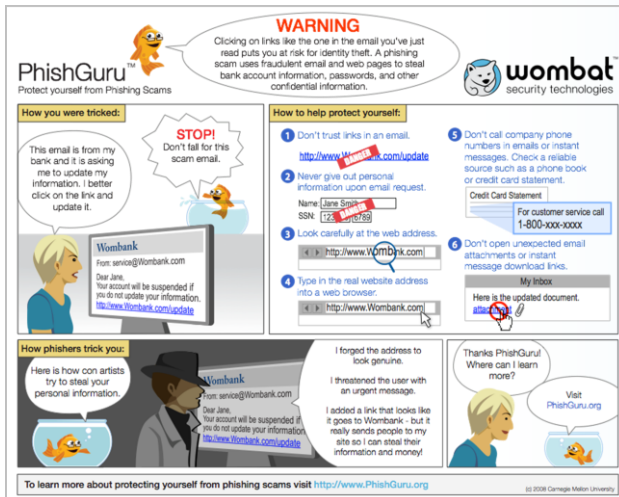

Phishing Vulnerability Assessment & Training Tool

Phish your employees before the criminals do and reduce your exposure!

Assess your employees' vulnerability to phishing attacks, and provide immediate training for those most susceptible. Wombat's PhishGuru service is the first step toward significantly reducing your exposure to attacks.

Scientific studies show that employees are not motivated to pay attention to traditional training methods. When trained with this approach, or via classroom lectures, users don't retain the information taught and continue to fall for phishing attacks. That's why Wombat's PhishGuru is unique. And it's not a simple penetration test.

A software-as-a-service product, PhishGuru is an online tool that assesses and trains employees with simulated phishing emails. This creates a unique teachable moment when employees fall for the simulated attack and are provided with immediate training—an informative illustration that explains what they did and how to avoid falling for similar phishing attacks in the future.

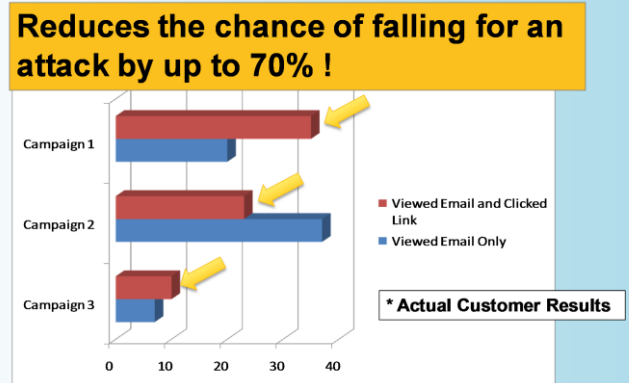

PhishGuru includes extensive analytic and tracking functionality. This enables cyber security professionals to analyze how well employees respond to the phishing emails across various campaigns and different attack scenarios.

Choose from a variety of customizable phishing email templates to:

- Craft your simulated phishing campaign
- Assess your employees' cyber security readiness
- Provide targeted training to those that need it most

In an actual Wombat customer account, employees were 70% less likely to fall for a subsequent phishing attack after testing with PhishGuru.

Couple Wombat's training modules with PhishGuru for the most comprehensive anti-phishing training solution on the market today. Assess your employees with PhishGuru and follow up with engaging and effective training like Anti-Phishing Phil and Anti-Phishing Phyllis.

Contact us to learn more about how we can reduce your exposure to phishing and other security attacks. PhishGuru will change the way your employees learn while giving you a powerful assessment tool to identify your security vulnerabilities.

About Wombat Security Technologies

With millions of users across North America, Europe, and Asia, Wombat Security Technologies is a global leader in cyber security awareness training and also offers unique anti-phishing filtering solutions. Wombat's products have been licensed for use in sectors as diverse as finance, government, insurance, healthcare, energy, e-tailing, logistics and education to name just a few.

Email Security Training Module

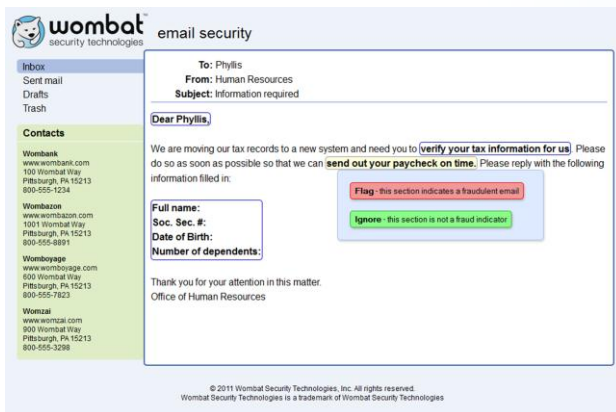

Teaches Employees How to Identify Traps in Emails

Victim of a phishing attack? Effective training in less than 10 minutes delivered in an engaging and interactive training module. 10-minutes of our training can reduce your employee's susceptibility to falling for a phishing attack by over 50%. Wombat's training delivers effective learning with lasting results.

Wombat's Email Security training module is the latest in Wombat's suite of cyber security training. Built on learning science principles, Email Security training provides effective email training in the context of a traditional email system.

The module is a 10-minute training session that teaches users to spot traps in fraudulent emails. Traps include fake links, malicious attachments, cash prizes, "respond-to" emails asking for sensitive information and much more.

Users are shown emails similar to what they might see every day. They are asked to identify if the highlighted areas in the emails are security traps or safe. The training is designed to provide immediate feedback, so users learn in real time.

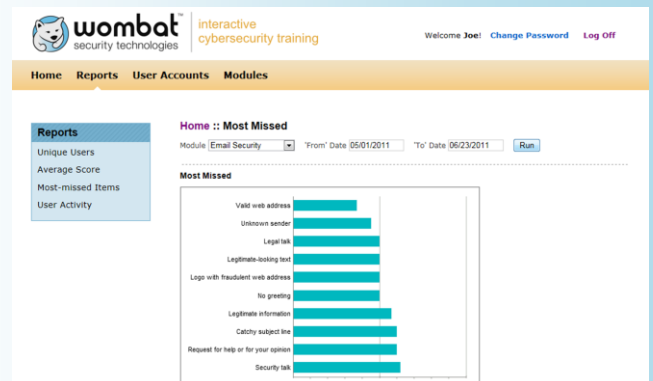

Email Security includes an extensive collection of randomized legitimate and fraudulent emails. Users

can take the training multiple times without seeing the same email messages. Email Security is interactive and engaging—which reinforces learning and reduces the chance of an employee falling for an attack.

Engaging and Effective Email Security Training

- Train employees how to identify traps within emails
- Know what to look out for and avoid
- Provide instant feedback
- Gather powerful data about areas of weakness

The module is SCORM-compliant and is also available in a 508-compliant version if desired. It can be customized with an organization's branding and specific emails of previous attacks if desired. It is easy to deploy and comes with extensive tracking and reporting capabilities.

Wombat's latest training module passes the test, providing engaging, efficient and effective employee security training. Give us 10 minutes and we'll reduce your exposure!

Fight cyber security crime with interactive training. Make learning enjoyable, and effective!

Anti-Phishing Phil Training Game

Teaches Employees How to Identify Malicious URLs

10-minutes of training can reduce the chance of your employee falling for a phishing attack by over 50% compared to traditional training methods! To drive lasting change in employee behavior, cyber security training must be engaging, efficient and effective.

Classroom training lectures are ineffective; online video training doesn't work. Static cyber security training emails don't work. What works to reduce the number of people clicking on dangerous URLs? Wombat's Anti-Phishing Phil training game does!

Developed using learning science principles, Anti-Phishing Phil is a SCORM-compliant computer security training game that teaches employees and customers to recognize fraudulent URLs. In just 10 minutes of play, the user makes decisions on the safety of 32 different URLs links. When employees make a mistake they learn why—immediately.

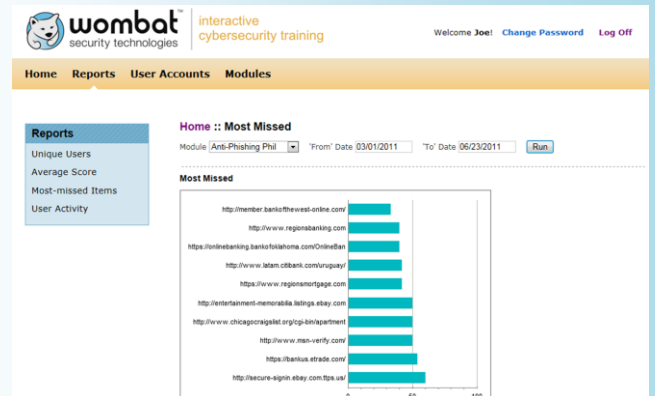

The latest release of the product incorporates a number of recent phishing attacks and the links used in the attacks. The game can also be customized to incorporate attacks that companies have seen themselves to ensure that employees are prepared.

“The ability of subjects who had played the game to distinguish legitimate URLs from fraudulent ones improved nearly twice as much as that of those trained with standard materials.” - Scientific American

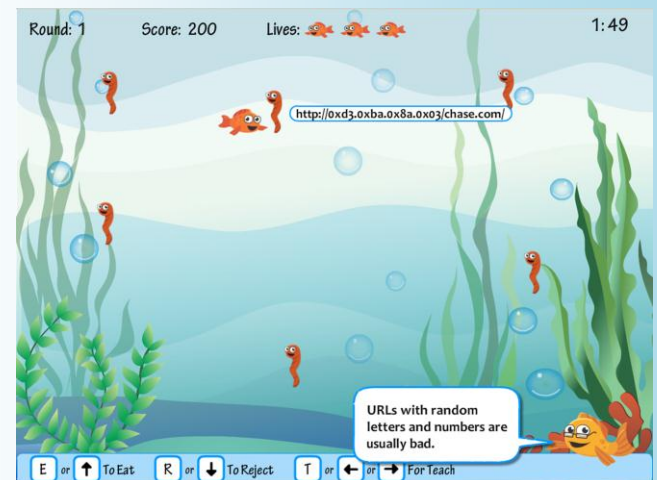

Best of all, Anti-Phishing Phil training makes a lasting impact. According to the Scientific American article “How to Foil ‘Phishing’ Scams,” which featured Anti-Phishing Phil, “the ability of subjects

who had played the game to distinguish legitimate URLs from fraudulent ones improved nearly twice as much as that of those trained with standard materials.”

Like Wombat's other products, Anti-Phishing Phil offers extensive reporting functionality to enable security professionals to track the performance of users and target training appropriately.

You can deploy Anti-Phishing Phil on your intranet. You can also choose to customize the game by licensing a version with your organization's branding and specific URLs. A 508-compliant version is also available.

Anti-Phishing Phyllis Training Game

Teaches Employees How to Identify Traps in Emails

Victim of a phishing attack? Effective training in less than 10 minutes!

10-minutes of playing our training games can reduce your employee's susceptibility to falling for a phishing attack by over 50%.

Wombat's training games deliver effective learning with lasting results.

Anti-Phishing Phyllis builds on the proven success of Wombat's training games, which have been licensed for millions of users worldwide.

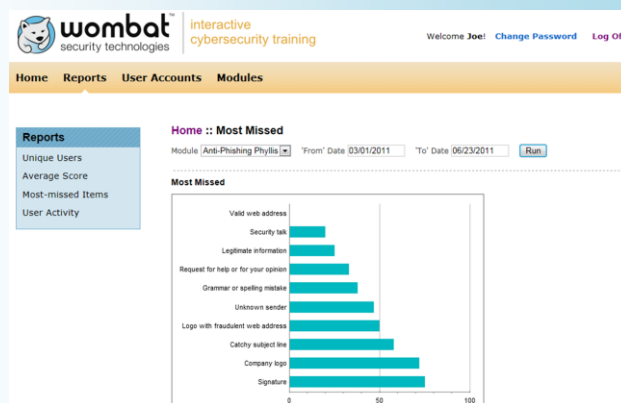

Anti-Phishing Phyllis is a 10-minute training game that teaches users to spot phishing traps in emails. Phishing traps include fake links, malicious attachments, cash prizes, "respond-to" emails asking for sensitive information and much more.

The email training game includes an extensive collection of randomized legitimate and fraudulent emails. Users can play the anti-phishing training game multiple times without seeing the same messages. Because Anti-Phishing Phyllis is fun, employees will play it more than once—which reinforces learning and reduces the chance of an employee falling for an attack.

Anti-Phishing Phyllis provides training in the form of emails with key areas of the emails highlighted. Users are asked to identify if the highlighted areas are security traps or safe areas in the email. The game is designed to provide immediate feedback based upon the user's response. Using "teachable moments" is a training process that has been proven to be more effective than traditional methods.

The game is SCORM-compliant and also available in a 508-compliant version. It can be customized with an organization's branding and specific emails of previous security attacks if desired. It is easy to deploy and comes with extensive tracking and reporting capabilities.

Fight cyber security crime with an interactive game. Make learning enjoyable and effective!
